MANIPAL UNIVERSITY JAIPUR
University under Section 2(f) of the UGC Act

NAME	**ANSHUL KUMAR SINGH**
ROLL NUMBER	**261450504826**
SESSION	**JULY-AUGUST 2026**
PROGRAM	**MASTER OF BUSINESS ADMINISTRATION (MBA)**
SEMESTER	**I**
COURSE NAME	**ENTREPRENEURIAL PRACTICE**
COURSE CODE	**DMBA113**

INTERNAL ASSIGNMENT ANSWER SHEET

ENTREPRENEURIAL PRACTICE

Assignment set –1

Question 1:

Answer:

Creativity is an important element of an entrepreneur. Without creativity, your business would be replicating an existing product. It plays an important role in generating ideas, identifying opportunities and innovation.

Idea Generation

Great ideas can often be sparked through a sudden 'lightbulb moment'. Usually, ideas come from something we notice that is annoying us in our daily lives. Sometimes it can be combining objects that you wouldn't think would go together. Other times it can be looking at a common problem but tackling it in a completely different way. An entrepreneur who always asks themselves why will never run out of ideas. Observing customers means that the entrepreneurs' curiosity has a clear direction.

Opportunity Recognition

For an idea to become an opportunity there must be a need/want, a willing customer, and a viable way to make money. Imagination is needed to spot opportunities like this as it can difficult to see how you can make money. Often demand can be hidden, so it requires imagination to spot. Two people may notice the trend but only one will see the opportunity to turn it into a business. Creativity connects the change in technology/lifestyle to an unmet need.

Innovation

This is where ideas are turned into something usable. Creativity still plays a role in this through finding ways to deliver, problem solving and adapting the model if the initial idea doesn't work. Ventures that become non creative after launch generally fall behind.

Case Study: Zomato

In 2008 Deepinder Goyal and Pankaj Chaddah worked for Bain & Company in Gurugram. Whilst observing their colleagues they noticed they were queuing to look at printed menu cards in the office canteen. Deepinder and Pankaj photographed the menus from local restaurants and uploaded them onto the web. This was the initial idea. The opportunity came from something that many had missed. There was no one place for Indian food lovers to compare restaurants, menus and reviews and restaurants couldn't target customers outside of their local area. Deepinder and Pankaj realized a simple directory would solve both these issues. By 2010 the website had been renamed to Zomato and started to expand city by city.

Zomato continued to innovate throughout the market. They moved from listing to reviews, then table bookings and eventually food deliveries due to more people using smart phones and wanting

quicker service. In 2020 Zomato purchased Uber Eats India. In 2021 Zomato went public. Now Zomato is one of the most famous internet companies in India for the everyday consumer.

Conclusion

Zomato shows creativity throughout. They firstly spotted an annoyance, then identified a gap in the market and finally adapted their model to meet the changing needs of their customers. This shows that creativity drives entrepreneurship.

Question 2:

Answer

Importance and different forms of Intellectual property (IP) for Entrepreneur

For start-ups, the real assets are not machines or buildings, but ideas for brand names and know-how. If these are not protected, a bigger competitor can copy them fast and for cost. Protecting property gives the entrepreneur exclusive rights over what they have created. It makes the business more appealing to investors. It also opens ways to earn money through licensing or franchising. It helps build a brand that customers know and trust.

The main types of property along with the Indian laws that cover them are:

1. **Patents**: These protect new inventions for 20 years under the Patents Act, 1970.
2. **Trademarks**: These protect names, logos, and slogans. Registration lasts 10 years. Can be renewed under the Trademarks Act, 1999.
3. **Copyright**: This protects written, artistic, musical and software works. It generally lasts for the author's life plus 60 years under the Copyright Act, 1957.
4. **Designs**: These protect the look of a product, such as its shape or pattern. They have been protected for 10 years. Can be extended by 5 years under the Designs Act, 2000.
5. **Geographical Indications (GI):** These protect products that are linked to a place. Darjeeling tea India's first GI-tagged product is an example.
6. **Trade secrets**: These are information like formulas or customer lists. India does not have a law, for trade secrets. So, they are protected through contracts and non-disclosure agreements.

The initial legal concerns involved in growing a business

1. **Selection of structure:** sole proprietorship, partnership, LLP or company. The rules for each of these – regarding liability, tax and compliance are different, (e.g. Under the companies ACT, 2013).
2. **Shop and establishment license,** Udyam registration, registration, and licenses and registrations of GST, etc., are also required to run the shop.

3. **IP Ownership:** the company needs to have an agreement in place with all co-founders, employees and freelancers, which states that the work they do belongs to the company.
4. **Name conflicts:** The name has to be checked against domain name registrations and trademarks to prevent similar conflicts.
5. **Contracts:** Agreements with co-founders, suppliers, customers and investors need to be transparent and put in writing, as unclear or incomplete documents is a frequent reason for legal conflicts.
6. **Continuous compliance and enforcement:** standards of labour law, tax law, data protection law, and others should be applied and enforced. The process to challenge and stop violations is sometimes long and costly

Handling IP and legal formalities up-front could save the entrepreneur a costly battle down the road and turn ideas into marketable business assets.

Question 3:

Answer

Growth strategies and challenges

Growth in my view is not about getting bigger. It's about building a company that makes money and stays strong while growing. Entrepreneurs usually have choices. The simplest path is market penetration. That means selling more of the product to customers by using better pricing, better advertising, or better service. Market development means taking the product to places or new groups of people. That could be a country or a new city. Product development means creating products for customers. Diversification is when products are combined with markets. This can be riskier. It can also lead to higher rewards. Some companies grow faster by working with businesses through joining together buying other companies or using their technology, customers, or size. Some companies decide to let others run the brand and share the cost of money through franchising or licensing.

The difficulties are genuine. Funding comes first since small enterprises frequently have trouble finding investors or loans for growth. Another issue is cash flow since sales may increase while client payments are delayed. The entrepreneur can no longer handle everything as the company expands. The founder must assign tasks and hire talent, which many people find challenging. Maintaining uniformity across sites in the face of competitors' evolving standards and growing compliance expenses adds pressure.

Succession planning and exit strategies

The goal of succession planning is to figure out who will take over the company once the founder leaves. This process helps the company stay alive in ways. It stops positions from appearing in leadership. Also, it makes it less likely that family fights will happen, which have made some family-owned businesses in India fail. When employees and investors know who will be in charge, they feel sure about the future. Also, the person who started the company is encouraged to teach the leader. This makes sure that knowledge passes on of disappearing over time. The Tata group is an example. Ratan Tata became the leader in 1991 after JRD Tata. This change happened smoothly. In business, give an example of leadership continuity.

The deliberate methods by which a founder reduces ownership or leaves a company are called exit strategies. Exit strategies can involve going public through an IPO selling the company to another company merging with another company, giving control to family members or senior managers, or letting employees buy the company. The founder can receive the value the founder has built over the years with an exit strategy. Exit strategies also protect employees' jobs. Exit strategies keep the brand strong because the company remains run by its owners. The company finds raising capital easier when investors know what return the company will give. Flipkart is an example. Walmart bought most of Flipkart in 2018. The company kept growing. People who invested early and the people who started the company got benefits. The people who started the company can start companies after they leave. This helps keep the economy full of people who want to start businesses.

To sum up, ways to grow help the company get bigger. Planning what happens next and how to leave makes sure the company keeps going after the founder. For a business to be strong and last time both things are important.

Assignment set –2

Question 4:

Answer

Entrepreneurship is the process of spotting an opportunity where no one see it, According to me gathering resources and taking calculated risks to create value through a new venture. Joseph Schumpeter described the Entrepreneur as an innovator who bring "new combinations" of products, methods or market into the economy. Today the idea covers social values as well as profit.

This procedure is motivated by the entrepreneurial mindset. The following are the key characteristics of an entrepreneurial mindset:

- **Opportunity-seeking:** People with this mentality view challenges as opportunities rather than barriers.

- **Calculated risk-taking:** Although they are not careless, these individuals are quite at ease with uncertainty.
- **Resilience:** These people see failure as a kind of feedback, keep pushing toward their goal of making better products or services for their customers.
- **Bias and action:** Waiting for a perfect plan they test their ideas quickly
- **Continuous learning:** They adapt to customer wants and to changes, in the market.

The mindset can be developed through experience and practice, which is why the surroundings of an entrepreneur matter so much.

Role of Role Models

Entrepreneurship appears possible when people look up to role models. Students believe that "I can also accomplish this" strongly when they see people such as Ratan Tata, Narayana Murthy or Falguni Nayar building successful companies. Role models also show how to make choices to handle failure and keep standards. People who are close to someone, such as a parent who runs a business, feel the impact even more because they see the hard work up close.

Role of Support System

Giving support is another key role in a strong support network. Mentors help by sharing connections and guiding the way. Family often gives encouragement and at times financial help. Colleges, accelerators and incubators step in with funding, training and access to workspaces. Government programs, like Startup India and Mudra loans make it easier to get money and remove barriers. Without this kind of support, many strong ideas don’t last. Entrepreneurs end up failing not because their idea is bad. Because they have no one to guide them and no funds to keep going.

Link with Sustainable Entrepreneurship

Sustainable entrepreneurship means creating value by balancing people, the environment, and profit. This is the bottom line. These Role models play a part here because they show that doing good can also lead to financial success. Harish Hande from SELCO proved that solar energy can work well for low-income households. His work showed that clean energy can be both affordable and profitable. This inspired others to start businesses, in sustainable energy, recycling, and waste management.

These types of businesses often start with costs and take longer to become profitable. That’s why support is so important. Impact investors, funds, renewable energy subsidies and mentors who understand social impact all help these companies grow. They provide the backing needed until the businesses become stable and self-sustaining.

To sum up, entrepreneurship is the process of making value from opportunity and entrepreneurship is made possible by an attitude. This way of thinking is inspired by role models and support networks to help put entrepreneurship into practice. Both are essential for entrepreneurship because they allow business owners to build successful operations that help the environment and society.

Question 5:

Answer

Corporate entrepreneurship is about encouraging thinking inside a company. It is also called an intrapreneurship. Of letting outside startups change the market, companies create a space where their own workers can spot chances to build new products and start new parts of the business. This usually happens in two ways: one is creating things like new products or better ways of working and the other is changing the company's overall direction and way of operating to stay strong, in the market. A good example is Google letting staff work on their projects, which led to Gmail. Another is 3M, where Post-it notes came from an experiment.

Reasons for Growing Importance

- **Rapid change and disruption:** Technology evolves fast. Customer expectations shift quickly. Companies that stick to products and models get left behind. Nokia and Kodak are examples of this.
- **Competition:** The world has become smaller through globalization. Digital platforms let new players enter markets easily. This means companies must innovate constantly just to stay in the game.
- **Growth beyond markets:** Many companies reach a point where their main markets are full. To keep growing they need ideas and new business areas. Internal ventures offer a way to grow than buying other companies at random.
- **Keeping employees:** Smart driven people often want more than a paycheck. They want to create something of their own. When companies give them space and ownership, those people are more likely to stay off starting their own business.
- **Response to opportunities:** Big companies are often slow. Decisions take time. Small teams inside the company can test new ideas fast. They can act before the competition is done.
- **Better use of existing resources:** Intrapreneurs already have advantages. They have the company's brand, money, distribution networks, and technology. These are things startups don't have. That gives them a start.

Comparison between Managerial and Entrepreneurial Decision-Making

Basis	Managerial Decision-Making	Entrepreneurial Decision-Making
Orientation	Efficiency and control of current resources	Opportunity and creation of new value
Approach	Analytical and planned, based on data and past records	Intuitive and experimental, often with incomplete information
Risk	Risk-averse, aims to minimize uncertainty	Accepts calculated risk and uncertainty
Resources	Decides based on resources already available	Decide first on the opportunity, then finds resources
Time horizon	Mostly short-term targets and budgets	Long-term vision and growth
Structure	Follow rules, hierarchy and procedures	Flexible, informal and fast
Failure	Seen as a mistake to be avoided	Seen as learning for the next attempt

Therefore, we can say that managerial decision-making keeps operations running while entrepreneurial decision-making fuels innovation and change. Neither managerial nor entrepreneurial decision-making is always superior. A strong organization needs managers who keep the business efficient and intrapreneurs who build its future.

In conclusion, I believe that corporate entrepreneurship helps established firms stay innovative, competitive, and focused on growth. Its importance is growing because of change, intense competition, and the need to retain talent. Companies that balance discipline with thinking in their decision-making are better placed to survive and grow.

Question 6:

Answer

International entrepreneurship refers to selling products or services, or conducting operations, in markets beyond the home country. It provides larger customer bases and greater growth, but it also introduces challenges that a domestic business never encounters.

Key challenges are as follows:

1. **Language and cultural differences:** Consumer preferences, purchasing patterns, commercial etiquette, and even hues or taglines may carry divergent meanings across different nations. A product that achieves strong sales in India could fail to perform well in other markets should it disregard cultural considerations.

2. **Regulatory differences:** Each nation maintains its own regulatory framework governing product standards, labeling, taxation, licensing, and intellectual property. For entrepreneurs, compliance with all of these regulations proves both costly and difficult to comprehend.
3. **Tariff and non-tariff barriers:** Tariffs, quantitative restrictions on imports, licensing requirements and stringent quality standards drive up expenses and diminish the product's competitiveness.
4. **Financial Risks:** Fluctuating exchange rates, delayed payments, elevated shipping expenses, and the risk that foreign purchasers may fail to remit payment can all adversely affect cash flow.
5. **Logistics and supply chain issues:** Customs delays, documentation issues and transportation difficulties can influence the speed and quality of a product's delivery.
6. **Lack of market knowledge and networks:** Frequently, entrepreneurs lack awareness of their competitors, their sellers, or the preferences of their customers. Furthermore, they do not possess individuals whom they can rely upon in other countries.
7. **Economic instability:** Alterations in government regulations, prohibitions, or financial difficulties can rapidly render a market unsafe.

Strategies to Overcome Barriers to International trade

1. **Thorough market research:** Study demands competitors, pricing and culture before entering. Starting with one or two similar or nearby markets reduces risk.
2. **Choosing the right entry mode:** Exporting, licensing, franchising or a joint venture can be selected based on resources. A local partner gives knowledge, contacts, and faster acceptance, and shares the risk.
3. **Localization:** Adapting the product, packaging, pricing, and promotion to local needs. McDonald's offering vegetarian items in India is a good example.
4. **Using government and institutional support:** Export promotion councils, the Directorate General of Foreign Trade (DGFT), trade fairs and free trade agreements help reduce duties and give market access in India's case.
5. **Managing Financial Risk:** Using letters of credit, export credit insurance and hedging against currency changes protests the business from payment and exchange losses.
6. **Building strong logistics and compliance:** Working with experienced freight forwarders and customs agents avoids delays and legal trouble.
7. **Using digital platforms:** E-commerce sites like Amazon Global selling and Alibaba let small entrepreneurs reach foreign customers without a large upfront investment.
8. **Gradual expansion:** Starting small, learning from feedback and then scaling up prevents heavy losses.

To sum up, expanding internationally brings substantial opportunities for growth; however, cultural differences, legal intricacies, trade obstacles, and financial hazards make the process difficult. Entrepreneurs who conduct thorough research, select appropriate entry strategies, tailor

their approach to local conditions, and take advantage of available support have a much greater chance of succeeding on a global scale.
